

OmniSphere

IoT Middleware from Omni-ID®

OmniSphere is a beautifully simple yet powerful and reliable middleware platform that takes the data from our range of Sense IoT devices and delivers it seamlessly to your existing corporate applications.

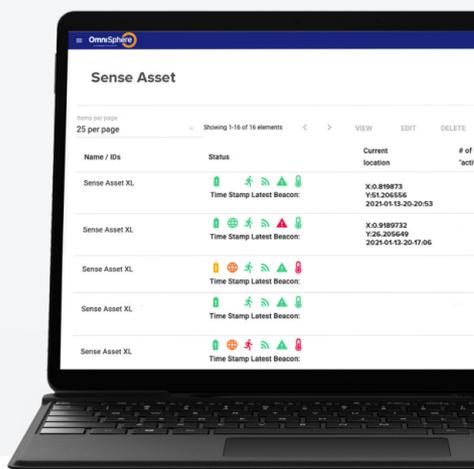

This modular middleware works diligently in the background collecting the data you need to enable you to monitor the real-time location, interactions and status of people and things in the physical world. As a result, even the most complex processes become visible and controllable.

In short the new combination of Sense devices and **OmniSphere** middleware allows you to :-

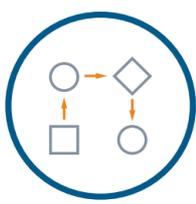

Locate Track & Monitor

assets or personnel like never before.

BENEFITS AT A GLANCE

Proof of Concept and feasibility studies are quick and easy

Device Management at the right scale to suit the customer's operations

Synchronization with other corporate systems

Unified point of contact for customers and channel partners

Fast & easy solution implementation from a ready-made application

Consummate device management platform with a range of easy to use dashboards

OmniSphere provides the perfect middle 'service' layer between Omni-ID Sense IoT devices and your corporate applications.

Integrates the major tracking and positioning technologies utilised by Sense devices:

Omni-ID®

Intelligent Tracking & Monitoring Devices
